

Leeds Beckett University

CASE STUDY

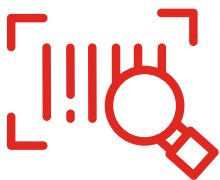

Fire Stopping Works

Location

Leeds Beckett University
Campus in Headingley

Job Details

Fire stopping works on
listed University
buildings

Neo began working with Leeds Beckett University in June 2021 following the installation of new fibre services throughout their buildings at the University Campus in Headingley, Leeds.

The buildings that required assistance included Grade II Listed Buildings, Caedmon Hall and Priestley Hall. A number of defects and non-existent fire breaks were identified that required attention and due to the protected status of the buildings the university services team identified a need for a Hilti approved contractor to carry out fire stopping works to achieve compliance with fire safety standards.

Neo were required to undertake surveys in each location and then carry out the works to reinstate fire breaks around new and existing services using Hilti fire products and Hilti recommendations.

“Their surveying team were meticulous in delivering a thorough survey and identifying the required works. The works were carried out to a high standard and the operatives were professional and respectful cleaning up after themselves after working in sensitive areas of the library.”

Paul Mason, Senior Project Manager
